

Full stack web development using python

HTML image

Saurabh Shukla (MySirG)

Agenda

- ① The image element
- ② alt attribute
- ③ making image a link

The image element

Images are defined with the `` tag.

The `` tag is empty tag.

To display an image on a page, you need to use the `src` attribute.

The value of `src` attribute is the URL of the image you want to display.

alt attribute

alt attribute in `` tag is important for search engines and in the scenario where image is not able to appear due to wrong URL or improper image load due to network issue.

Making an image as a link

You can make your image as clickable link just like hypertext.

```
<a href="URL"></a>
```
