

Full stack web development using python

HTML on VS code

Saurabh Shukla (MySirG)

Agenda

- ① First HTML document
- ② Editing on vs code
- ③ Rendering on browser

First HTML Document

- Create a file with extension .html
- Open file with any text editor
- write some text without HTML and render it with browser
- Use some HTML tags to see the effect

Editing on vs code

- open html file using vs code
or create a new file using
vs code
- Explore Emmet Abbreviation
- understand boiler plate code.

Run HTML on browser

HTML document is rendered by a browser.
