# Full stack web development using python

JavaScript DOM

Saurabh Shukla (MySirG)

Agenda

① What is DOM ?

② document Methods

③ innerHTML

④ Style

Document Object Methods

document is an object

document.methods()

document.getElementById("someid")

It gives an object representing an HTML element with given id.

document.getElementsByTagName("tag")

It gives an array of objects representing HTML elements with given tag name

document.getElementsByClassName("classname")

It gives an array of objects representing HTML elements with given class name

innerHTML

<Tagname > innerHTML </tagname>

Style

Style property of html element object is used to read and write css property of the element

```
object.style.cssProperty = "new value";
```
