# Full stack web development using python

CSS position

Saurabh Shukla (MySirG)

Agenda

1. Position
2. static position
3. fixed position
4. relative position
5. absolute position

Position

The css positioning properties allow
you to position an element

static positioning

fixed positioning

relative positioning

absolute positioning

Static Positioning

HTML elements are positioned static by default.

A static positioned element is always positioned according to the normal flow of the page

static positioned elements are not affected by the top, bottom, left, and right properties

Fixed Positioning

An element with fixed position is positioned relative to the browser window

It will not move even if the window is scrolled

Relative Positioning

A relative positioned element is positioned relative to its normal position.

Absolute Positioning

An absolute position element is positioned relative to the first parent element that has a position other than static.

Properties to set position

left
right
top
bottom

these properties will not work for static positioning.
